

Appendix 2

Design would follow a multi-station approach. The facilities in this case would be established across the site in an organised manner and connected through an existing, improved or new path that is functional and maximises the park usage. Current design proposals would look at a low level, beginner-friendly aesthetically pleasing skate park similar to that of Ruddington (Rushcliffe County Park):

Case studies include that of Blythe:

Other possible design/placement could be along paths to form 'skate paths' which puts skate park items alongside a path.. This would work in conjunction with the possibility of improving all the paths on pasture road to be wheel friendly. In this case making sure the design of the site is not just skateboard accessible but also usable by BMX may be achievable with this location. Although for this consultation with public would have to investigate the demand for this kind of skate park as well as what further design specifications would be needed.

There is also a case to look at integrating 'play' and 'skate' parks which merges play grounds with that of a skate park. This is a possible option for Pastures road with the existing playground and the possible space around it designated for the skate park elements.

Examples of the Integrated Play and skate parks:

Overall the current locations look at all the possible design concepts and highlights the site wide array of options. Much of these options were possible for alternative locations although Pasture Recreation Ground could encompass all of them in part to its scale and existing infrastructure (Paths and Playground).

Based on additional Information shared by Skate Nottingham and Maverick UK:

- The suggested size for our site could be around 360-380m².
- Construction materials to be as environmentally friendly as possible and average cost per metre square is £600.
- Post construction - Contractors such as market leaders Maverick and Evolution Skate parks show a track record of a product that allows for minimal maintenance and have over 10 years is warranty provided.
